AGENDA ITEMS		PRESENTER
Predictive Services Update: <p>Latest guidance suggests strengthening SW winds for Friday along with still moderately dry humidity levels across parts of Nevada and Wrn Utah. In these areas we expect winds of 20-40 mph with gusts of 55 mph in localized areas. Given that we will be entering a holiday weekend, increasing the human element, we have updated our forecast to issue HIGH RISK for Wind in these areas (refer to map). Moderate winds could linger across these areas into Saturday.</p> <p>Otherwise, clouds have moved into many northern and central areas along with much higher humidity levels. Some spotty light showers have already occurred across the mountains of Wrn ID. Spotty sprinkles or light showers today will become steadier and more widespread across ID by late Fri thru the weekend. Areas of Nrn NV and parts of UT will also see some scattered shower activity. Precipitation amounts in Central Idaho are expected to range from 0.35 to 0.75 inches during this 4-day stretch of cool, moist weather...with lesser amounts and spottier coverage further south. Snow levels in ID on Saturday could drop down to 6000 ft.</p> <p>Another weak disturbance late Sunday into Monday in the north...otherwise a gradual return to near normal temperature/humidity by early next week, but no extreme heat or dryness is expected.</p>		Predictive Services
New Fire Activity/GACC Update: Light IA 6 1,969 acres New Large Fire UT-BRS-Blue Creek - 1209 100% 10 acres in Idaho		Center Manager/COD

<p>Going to stage a T2IA crew in Twin Falls through the wind events.</p> <p>Seeing an influx of resources and back to being able to meet draw-down. With predictive services forecast and resource availability recommending PL 3 Tomorrow.</p>
